

LED-lighting in a pig stable can have a positive effect on the productivity, reports more customers, who set up the light. (Photo: Anne Wolfenberg)

Great satisfaction with LED lighting in pig stables

Danish Company gets many positive reviews from customers, with their LED lighting for pig stables.

By: Niels Rosdahl Jensen

Everyone who works with pig production, knows that good light is important. We made it easy to both mount and use yourself, and furthermore it is cheap in operation.

- Explains Rune Nielsen, Director of RN Solutions, who is selling LED lighting to pig stable etc.

When the company does a follow up on the customers experience with the products, it is shining through, that there is a great satisfaction.

Almost 30 percent of the customers, think that it is better than they expected, while the remaining 70 percent think it meets their expectations. Furthermore, several pig producers report a higher productivity.

Unique picture

The survey was made by sending out surveys to the customers. Rune Nielsen estimates that, about half of the customers returns with answers. Among these answers, there is a quite unique positive picture.

- We also call some of the customers, which have not answered, and then we get the same positive feedback, says Rune Nielsen.

International recognition

This summer, the company won internationally honors in the wake of World Pork Expo - World Exhibition for Pig Production. RN Solutions was highlighted, as one of the eight products at the show that have the greatest potential for helping the world's pig producers to an improved efficiency.
