

Increase productivity of your dairy production with LED

At Virkelyst Agriculture, Gregers Kristensen has installed new LED lighting from RN Solutions. "2 hours it took, to install in the milking parlor, and it has improved the working environment significantly" Gregers says. "It's a nice update to an older milking parlor. And now we can wash as much as we like on the luminaires" - he adds.

The milking parlor is the place where work is done most hours a year on a dairy farm. Therefore, the working environment must be the best possible. Lighting and easy maintenance is an important factor in this regard.

RNS luminaires are well protected against "electronic disturbance" and does not affect antennas, ear scanners, etc.

An easy and cheap upgrade of an older milking parlor. In addition, due to the many hours of durability, it is repaid in a short period of time.

With RN Solutions specially designed light concepts for livestock farms you get:

- **Easy installation** - our price-efficient Plug´N Play™ solution that can easily be installed by the farmer or the usual electrician
- **Significant savings on electricity bills** - 50-80% per year, depending on the current light solution
- **Long-term solution:**
 - 2 year warranty
 - 50.000 hours durability
 - All equipment is waterproof and has special-coating against ammonia, acid, etc.
- **Products we recommend:**
 - RNS Plug´N Play™: **FARM-LIGHT + MODULAR SYSTEMLIGHT**
